

Area Purge for Andover Continuum™

The Andover Continuum “Area Purge” utility purges (removes) selected personnel’s access to areas in a facility based on cardholder inactivity for these areas during a specified time period. The “Area Purge” utility not only limits the risk of unauthorized card use, but is especially beneficial to larger facilities where cardholder database cleanup can be extremely tedious and time-consuming. In today’s world of heightened security concerns, many corporations are now requiring this feature.

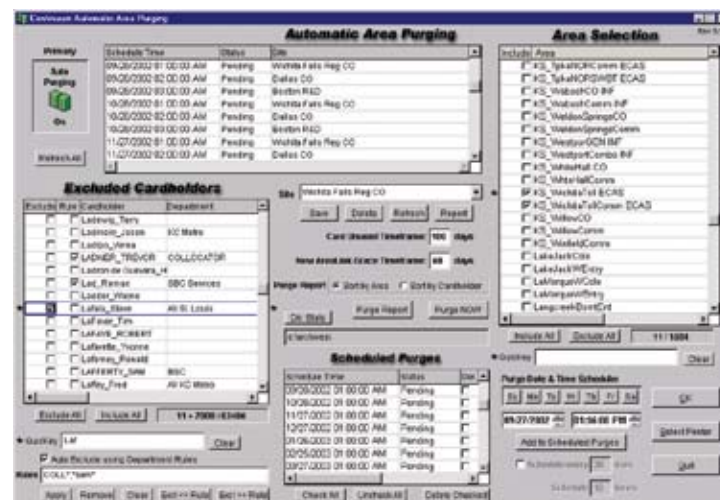

The “Auto Purge” utility is extremely flexible. You can select different criteria and rules for your purges, and once configured, the system can run automatically or on an as-needed (manual) basis. In addition, an “Area Purge Reports” application provides a variety of reporting options and e-mailing capability.

The “Area Purge” utility uses (and requires) the Andover Continuum “Access Event Archiver” database as the source of access event information, along with Andover Continuum CyberStation workstation to perform area purgings.

AUTO AREA PURGING

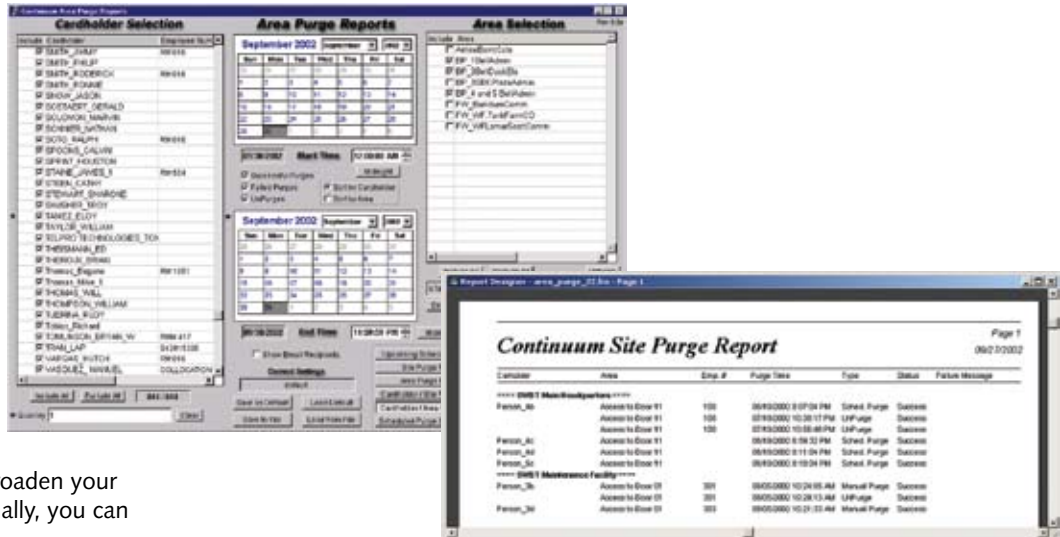

Using the automatic purging feature, access privileges can be removed from cardholders who have not used their cards in the selected areas during a specified time period; for example, in the last six months, using pre-scheduled purge dates and/or frequencies. Using an easy-to-use point-and-click on-screen configuration screen, “purge areas” can be selected individually or in groups and specific cardholders can be excluded from the purge process. A manual “Purge Now” feature, with password protection, is also available.

- Automatic Deletion of Access Privileges Based on Inactivity
- Lessen Risk of Unauthorized Card Use
- Overall System Security Increased
- Flexible Setup Allows Multiple Purge Rules and Schedules
- Tremendous Time Savings Compared to Manual Database Cleanup
- Automatic and Manual Purge Routines
- View, E-mail Reports to Confirm Purge Results
- Reports Allow Preview of Upcoming Purges
- “UnPurge” Feature Restores Areas Inadvertently Purged for a Cardholder

AREA PURGE REPORTS

The "Area Purge Reports" application provides a wide variety of reporting options. You can produce reports on specific (or all) sites, areas, and cardholders, check the status of scheduled purges, and preview upcoming scheduled purges. The user-friendly report configuration screen features calendar and time controls that allow you to quickly narrow or broaden your report time frame. Additionally, you can print or e-mail any report.

Area Purge Report Screen and Site Purge Report

AREA UNPURGE

In the unlikely event that certain cardholders are purged inadvertently, an "Area UnPurge" feature allows you to quickly and easily restore purged areas and schedules. Performing an "UnPurge" is as easy as running a report to select the cardholder's areas and clicking on the "UnPurge" button.
