

webClient™ pro

Web Browser Access to Your *Continuum*™ System

MANAGING YOUR FACILITY JUST GOT EASIER!

Andover Controls' new web.Client Pro software lets you access your *Continuum* facility management system from any PC in your building or over the Internet. No need to purchase dedicated workstations — any authorized user can now access the *Continuum* control system in their facility. The front receptionist, a department head, a security guard, an HVAC Technician, or your Human Resource Manager can log on to web.Client Pro right from their own desktop PC to modify room temperatures, manage card access, view camera video, acknowledge alarms, adjust an occupancy schedule, etc. At home? No problem! Use your standard Internet access to dial-in to web.Client Pro and make modifications to the *Continuum* system, as needed.

SIMPLE TO SET-UP, SIMPLE TO USE

web.Client Pro is password-protected and the software is designed so each user can log on quickly and see only the information they are authorized to see. Intuitive web pages display quickly on each user's PC. Little training is required and there's no set-up nightmares — web.Client Pro comes pre-configured right out of the box. Just install on a central *Continuum* system server and you'll be up and running in no time!

A Host of Features in a Web Browser Environment

DYNAMIC GRAPHICS

web.Client Pro uses your existing *Continuum* graphic panels! Users can pull up a floor plan to view temperatures, humidity, or air quality information in their building, check the status of air handlers, chilled water systems, and lighting; or monitor power consumption and demand. Need to make a quick adjustment? web.Client users can click on an equipment schematic to turn it on or off or adjust the setpoint.

CALENDAR-BASED SCHEDULES

Let web.Client Pro users with a vested interest in a specific area schedule the applications for that area — when equipment runs, when lights are on, when people have access, and when doors are locked. And with web.Client Pro, the delegated users can make those last-minute schedule adjustments themselves, saving valuable time for the building's facility and security staff.

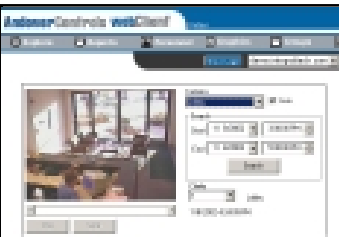

ACTIVE ALARM VIEWS

From invalid access on a door to a high temperature alarm — *Continuum's* powerful alarm management system can now be accessed in the web.Client Pro browser. Upon an alarm, *Continuum's* familiar Alarm Status Bar and color-coded Alarm Viewer appear dynamically on a web page so authorized web.Client Pro users can acknowledge them and take the appropriate action.

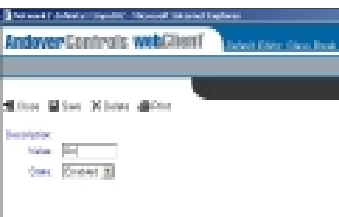

SIMPLE PERSONNEL MANAGEMENT

web.client Pro provides *simple* access control. Forget complicated data entry forms! web.Client features easy-to-use and concise personnel record forms for each task: a "Search" screen to search for personnel; a "Personnel Editor" screen to add, delete, or modify a personnel record, or to add a visitor or contractor card; and an "Access Event Report" screen to generate reports based on time frame, area, and person. By delegating this simplified form of personnel management to multiple web.Client Pro users, access control is tighter on the departmental level and those annoying backlogs in the security office are eliminated.

POWERFUL DIGITAL VIDEO INTEGRATION

Combine the simplicity of web.Client Pro with the power of Andover's digital video capabilities and you have a comprehensive digital video surveillance system right on your desktop PC! web.Client Pro can connect to any Andover DVX Digital Video Recorder anywhere on the network. Users can view live video from any camera and retrieve recorded video clips on activity that took place in a selected area of the building.

CONVENIENT EXPLORER AND DATABASE SEARCH TOOLS

web.client Pro provides easy-to-use tools to view and search your *Continuum* database. Quickly explore for specific points using filtered search boxes or view your entire database using web.Client Pro's "Explorer". Click on a point to edit its value and/or enable/disable it.
